

A MEANS OF WIRELESS COMMUNICATION

BuZZone is an application that makes it easier for people to search for new contacts and communicate using handheld devices, such as Bluetooth PDAs and laptops. The system is empowered with Bluetooth wireless technology that is becoming increasingly popular worldwide. The name "BuZZone" is composed of two words: Buzz and Zone to give you the main idea of the product.

KEY FEATURES

BuZZone offers several important and distinct advantages that make wireless communication more convenient and fascinating. The following key features underlie the BuZZone concept:

- **Regular profile search**
Each BuZZone user can create two types of profiles: his/her personal profile that includes the name, age, and photo, and a profile with the search criteria for potential contacts. A regularly performed search that usually takes less than a minute displays a list of people located nearby whose profiles match your search criteria and are available for chat. You can immediately view the profiles of those people.
- **Text chat**
BuZZone allows users to send and receive text messages that are instantaneously delivered. A user-friendly interface facilitates typing and viewing text messages. The number of simultaneous sessions is unlimited.
- **Voice messages**
You may avoid typing text messages by sending voice messages. BuZZone records and sends 15 sec voice messages and stores the last voice messages in the history.
- **Phone**
If two speakers want to continue their dialog, they can switch their BuZZone to phone mode. The quality of BuZZone phone communication is the same as that of your cell phone but it is absolutely free of charge.
- **Forums**
BuZZone users can organize forums: start topics and post messages. BuZZone broadcasts messages through intermediate devices, thus extending the Bluetooth coverage area. Every user can subscribe to forums of interest or start his/her own forum, start new topics and post messages. With BuZZone-based forums, everyone can easily broadcast news, announce events, start discussions, advertise products or services.

HOW YOU CAN USE BUZZONE

BuZZone can be used in a variety of ways. It depends only on your fantasy and creativity. Below there are only a few most typical examples of how and where to use BuZZone:

When you want to make a romantic contact with a hot girl/guy

Imagine that you are a young man spending time in a cafeteria or club full of attractive girls and women but you are too shy to start talking to them. Using BuZZone, you can easily start a conversation with the girl you liked most, preparing yourself for further actions.

When you have much time and nothing to do

Not only single young people may want to make contacts with women. Everyone has been in a situation when he/she had to wait for something, for example, a flight or a bus for long hours. If your flight has been delayed, use your BuZZone to start talking with a person who is also waiting for this flight. If everything goes right, you can keep on chatting during the flight even if your seats are in different cabins.

When personal conversations are inappropriate . . .

Everyone who has ever been at meetings or conferences knows well how boring can be a long-hour presentation: If you start talking to your colleagues, it will sound at least impolite. BuZZone seems to be the best solution! Why don't you press a few keys to initiate a talk to a bored colleague about a yesterday's soccer match?

Or prohibited

Each of us had to pass many examinations and tests. Sometimes, when you need a hand of your mate, BuZZone will solve all your problems! Send your question to the mate who is out of the room and receive the right answer immediately. Make sure that the professor is not using BuZZone at the time.

TECHNICAL SPECIFICATIONS
